CEN standard EN 15804 serves as the Core Product Category Rules (PCR)
Product category rules (PCR): Construction Products, PCR 2019:14. Version 1.11.
PCR review was conducted by: The Technical Committee of the International EPD® System. See www.environdec.com/TC for a list of members.
Independent third-party verification of the declaration and data, according to ISO 14025:2006:
☐ EPD process certification ☒ EPD verification
Third-party verifier: Verifier accredited by The International EPD® System Name: Patxi Hernandez Individual verifier E-mail: patxi@aureaconsult.com Approved by: The International EPD® System
Procedure for follow-up of data during EPD validity involves third-party verifier:
⊠ Yes □ No

The EPD owner has the sole ownership, liability, and responsibility for the EPD.

EPDs within the same product category but from different programs may not be comparable. EPDs of construction products may not be comparable if they do not comply with EN 15804. For further information about comparability, see EN 15804 and ISO 14025.

Company information

Owner of the EPD: Gypfor S.A

Contact: Bernardo Pessanha- info@gypfor.com - Gypfor S.A - +351269098278 - http://www.gypfor.com

<u>Description of the organisation:</u>

Gypfor operates one of most recent production unit of gypsum plasterboard in the Iberian Peninsula. With an installed capacity of 18 million m² per year, this unit produces a wide range of gypsum plasterboards with different specifications, to deliver its clients solutions for works and projects using gypsum board with the most suitable characteristics. Strategically located near an important logistic hub, the port of Sines, the proximity to main roads and good shipping accessibilities allows a sustainable and economical distribution of its products.

Gypfor has implemented a Quality Management System according to ISO 9001 and all products are produced and certified according to EN 520, guaranteeing a quality product according to international market requirements.

Gypfor is also committed with its goals on sustainability in industrial production. Specific measures to reach these goals include prioritizing recycled raw materials such as paper, wood stick pallets and waste board, having nearly 20% of electricity used in production generated by renewable solar energy, using a fleet of 100% electric forklifts in its operations, and providing its people with solutions for EV charging.

QUALITY POLICY: ISO 9001:2015

Name and location of production site: the declared section Aqua plasterboard is produced by Gypfor S.A. The production plant is in:

GYPFOR, Gessos Laminados SA. Zona Industrial Logística de Sines, Zona 10, lote E8 7520-309 Sines Portugal

Product information

Product Name: Aqua Plasterboard

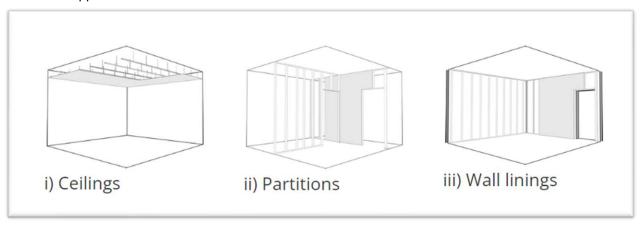

Product description:

The GYPFOR AQUA board is suitable for indoor drywall applications on ceilings, partitions, wall linings and other generic application elements. Enhanced quality board designed for applications where extra moisture resistance is required, such as kitchens, bathrooms, laundries, public bathrooms in hospitals, hotels, and schools. It can be used in applications that require direct mechanical attachment to wood or metal structures in or pasted with adhesives. It should not be applied at temperatures above 52 degrees Celsius (125 degrees Fahrenheit) for prolonged periods of time, or in areas with extreme humidity. To maintain GYPFOR AQUA performance integrity, the drywall plasterboard should be protected from exposure to adverse conditions during storage and construction.

Suitable for application in:

Technical description, and applicable standards:

Type of board	H1	EN 520
Reaction to fire	A2-s1, d0	EN 520
Resistance to vapor water	10	EN ISO
nesistance to vapor water	10	10456
Thermal conductivity (W/m.°C)	0.25	EN ISO
memai conductivity (w/m. c)	0.25	10456
Density (kg/m³)	≥ 660	No
Density (kg/iii-)	≥ 000	applicable

More information about the product is available at: gypfor.com

UN CPC code: 547 Building completion and finishing service

LCA information

Declared unit: 1 m2 of Aqua plasterboard BA13 of 12,5mm thickness.

<u>Reference service life:</u> 50 years regarding lifetime of plasterboards when applied at normal conditions. *More information https://gypsum.org/life-cycle-resources*

<u>Time representativeness:</u> primary data from the manufacturing site ,and the electricity mix of the electricity supplier refer to the year 2021.

<u>Database(s)</u> and <u>LCA</u> software used: Ecoinvent v3.8 (allocation, cut-off by classification) database and SimaPro 9.3 software have been used for the LCA calculations. LCA methods used are EN 15804:A2 compliant.

<u>Cut off rules</u>: More than 95% of the data for total upstream inflows and the central module have been included

Allocation: Production, energy and waste data have been assigned based on physical criteria of mass

Description of system boundaries:

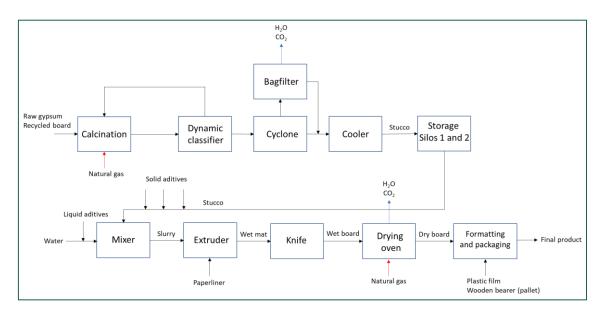

Cradle to gate with options, modules C1-C4, module D and with optional modules A4-A5 and B1-B7. The modularity and the polluter payer principles have been followed.

The following processes have been excluded:

- Flows related to human activities such as employee transport
- The construction of plants, production of machines and transportation systems, and maintenance activities.

The following describes the production process:

The production process is divided into two parts: calcination and formation. In the first stage of the process, the raw material, calcium sulfate or gypsum (CaSO₄ • 2H₂O), is grinded into the desired particle size and partially dehydrated using heat to form stucco (CaSO₄ • ½ H₂O) and stored as a powder on vertical silos. The second stage of the process takes advantage of the properties of the stucco, which is easily malleable, and if mixed with water in the right proportions, can return to its original crystalline form and regain its hardening properties of gypsum. The stucco is then mixed with water and other additives and extruded with a special paper sheet on each side, resulting in a board shape. The production line is specially designed so that the stucco is completely rehydrated before cutting into the desired length. After this phase, the boards enter a dryer to remove the excess water and accelerate the mineralization process of gypsum. Exiting the dryer, the board is trimmed into the final dimensions and palletized.

As permitted by EN 15804, the results of stages A1-A3 have been grouped into a single product stage (A).

A1. Raw Material Supply

- Extraction and processing of raw materials (Mineral gypsum, additives, starch, among others))
- Generation of electricity and heat from primary energy resources
- Processing up to the end-of-waste state or disposal of final residues, including any packaging not leaving the factory gate with the product.

A2. Transportation

• External transportation to the core processes and internal transport.

A3. Manufacturing

- Manufacturing of the construction product and co-products.
- Production of ancillary materials or pre-products.
- Treatment of waste generated from the manufacturing processes. They are processing up to the end-of-waste state or disposal of final residues, including any packaging not leaving the factory gate with the product.

A4. Transport

Transportation from the production gate to the construction site

SCENARIO INFORMATION	VALUE/DESCRIPTION						
Vehicle type used for transport	Long-distance truck						
	Transoceanic ship						
Vehicle load capacity	Truck: 32 tones						
Fuel type and consumption	Truck:31,1L/100 km						
	Ship: 0,0014L/100 TnKm						
Distance to the construction site	Truck: 445,92 km						
	Ship: 507,68						
Capacity utilisation (including empty	Percentage assumed in Ecoinvent						
returns)							
Bulk density of transported products	8,70 Kg/m2 (including packaging)						
Volume capacity utilisation factor	1						

A5. Construction Installation:

The product is directly transferred from the truck to the construction site.

SCENARIO INFORMATION	VALUE/DESCRIPTION
	Metalic frame (4)
Ancillary materials for installation	Screws (21)
	Paste (0,54)
Water use	Not used
Other resource use	Not required
Quantitative description of the energy	
type and consumption during the	Not used
preparation and installation process	
Direct emissions to ambient air, soil and	
water	-
Waste materials on the building site,	No generation
generated by the product's installation	No generation
Output materials as a result of waste	Product waste
processing at the construction site	i roduct waste

B1-B7. No material use or energy consumption is required during the use stage of the products under study.

C1. Deconstruction/demolition

• The impact has been considered.

C2. Transport

• Transportation of the discarded product accounts for part of the waste processing, e.g. to a recycling site and transportation of waste.

C3. Waste processing for reuse, recovery and/or recycling

• It is considered that there is no recycling or reuse at the end of the product's life because, during the demolition of buildings, there is no selective separation of materials in the vast majority of cases. Consequently, the impact is considered 0.

C4. Disposal

Waste disposal, including physical pre-treatment and management of the disposal site.
 According to the "polluter pays principle, emissions from waste disposal are considered part of the product system under study and, therefore, part of this module.

SCENARIO INFORMATION	VALUE/DESCRIPTION
Collection process specified by type	The product is collected completely mixed with
	the construction waste.
Recovery system specified by type	0 Kg intended for reuse
	0 Kg intended for recycling
	0 Kg intended for energy recovery
Disposal specified by type	Disposal to landfill
Assumptions for scenario development	A lorry of the size class 16-32 metric tons gross
(e.g. transport)	and Euro VI emissions class
	Diesel Fuel consumption: 25,5 l/100 Km
	Distance: 50 km

Scenarios included in A4-A5 and C1-C4 are currently in use and represent one of the most probable alternatives.

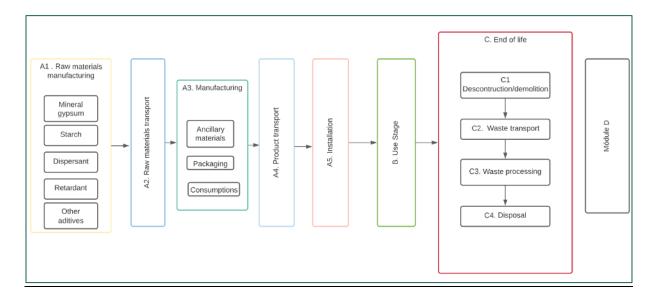

D. Reuse-recovery-recycling potential

This product has no considerable benefits due to recycling or/and reuse.

System diagram:

More information:

- The underlying LCA study has been carried out by Isolana Energética
- The study covers at least 95% of the materials and energy per module and at least 99% of the total use of materials and energy of each unit process.
- More information about the product is available at: gypfor.com

Information on biogenic carbon content

Results per declared unit							
BIOGENIC CARBON CONTENT	Unit	QUANTITY					
Biogenic carbon content in product	kg C	6,42E-01					
Biogenic carbon content in packaging	kg C	7,33E-02					

Note: 1 kg biogenic carbon is equivalent to 44/12 kg CO₂.

On one hand, according to the "Results on impact categories" figure, in general terms by stages and their respective indicators, stages A1-A3 represent 57,14%, stages A4-A5 14,18% and 7,30%, respectively. Regard to stages C1, C2, and C4 represent 19,33%, 0,66% and 1,40%.

On the other hand, the product stage (A1-A3) is the most representative of the system, being the stage where most of the impacts are found. During this stage, 61,03% of the impacts associated with global warming, 65,43% of the impacts associated with using non-renewable resources, and 86,05% of the impacts associated with water consumption are produced. Finally, the total climate change impact over the product's life cycle is 3,08E+00 kg of CO2 equivalent.

Results on impact categories

Annex I Summary of results

Environmental impacts								
	Product stage		Transport	Installation	Use	End of life		
Parameters		A1/A2/A3	A4	A5	Ш	O	Total	
	Global Warming Potential (GWP- Total) kg CO2 eq/UF	1,9	0,73	0,32	0,00	0,2	3,1	
	Abiotic depletion potential ⁽¹⁾ (ADP-fossil fuels) – MJ/UF	33,7	11,8	4,21	0,00	2,9	52,6	
O	Energy consumption ⁽²⁾ - MJ/UF	42,5	12,7	5,0	0,00	3,1	63,2	
	Water consumption ⁽³⁾ - <i>m</i> ³ / <i>UF</i>	0,03	0,001	0,003	0,00	0,002	0,03	
V	Waste production ⁽⁴⁾ - kg/UF	0,17	1,06	0,6	0,00	17,4	19,2	

⁽¹⁾ This indicator corresponds to the parameter Abiotic Depletion Potential (fossil fuels).

⁽²⁾ This indicator corresponds to total primary energy consumption (renewable + non-renewable).

⁽³⁾ This indicator corresponds to the net use of freshwater resources.

⁽⁴⁾ This indicator corresponds to the sum of waste (hazardous, non-hazardous and radioactive)

Annex II

Aqua plasterboards are produced in different format. While the 12,5mm thickness represents the majority of the production, the manufacturing process includes other thicknesses. To estimate environmental impacts for other thicknesses, results might be multiplied by their corresponding factor in the following table:

	Aqua plasterboard		
	Aqua BA13		
Thickness	Dimensions m ²	Weight kg/m ²	Conversion factor
12.5 mm	1,62		
12.5 mm	2,4		
12.5 mm	2,64		
12.5 mm	3	0.65	4
12.5 mm	3,12	8,65	1
12.5 mm	3,24		
12.5 mm	3,36		
12.5 mm	3,6		
	Aqua BA15		
15 mm	2,4		
15 mm	2,64		
15 mm	3	11,28	1,30
15 mm	3,12		
15 mm	3,6		
	Aqua BA18		
18 mm	3	12,07	1,39
18 mm	3,6	12,07	1,39
